

CRC justONE

CHILD-RESISTANT
CLOSURES
REINVENTED

ALPLA PHARMA

With CRC justONE we have reinvented the production process of child-resistant closures (CRCs): The novel closure is produced in only one piece – unlike traditional tamper-evident CRCs, which are injection-moulded in several pieces and subsequently assembled.

Streamlining the production process brings many advantages. The manufacture of CRC justONE requires up to 25% less material. This makes CRC justONE more sustainable, but also more cost-efficient. Simultaneously, there is no loss in quality or durability of the closure. And for the consumer nothing changes – the well-known push and turn opening procedure still works exactly the same.

The closure is made of HDPE and features a tamper-evident band. Furthermore, a liner can be added that suits the customer's requirements. CRC justONE is compatible with 28 mm standard necks used in the pharmaceutical market for glass and plastic bottles.

The novel CRC has been tested to meet all quality standards and holds the certifications 16 CFR § 1700.20 as well as ISO 8317 for child-resistant packaging for bottles ranging from 30 ml to 1.5 litres.

How CRC justONE works

ALPLA Werke
Alwin Lehner GmbH & Co. KG
